Hi. I'm a visual designer in Chennai, India with a working knowledge of the design industry. I'm skilled at graphic design, web interfaces, design development and project management. I graduated in 2016 with a bachelors in architecture. I hope to pursue graduate level education in order to exapnd my knowledge of user experience design and have better professional opportunities.

EDUCATION

Sarvajanik College of Engineering & technology, Surat   Sep 2010 - Nov 2016
Bachelor of Architecture

- Designed architectural projects of various scales including installation, residential, housing, institutional, and urban insert.
- Grew design conceptualising and development skills, critical thinking and contextual analysis skills.
- Developed artistic skills such as sketching and model making.
  Graduated with a cumulative score of 60%

Apart from my college curriculum, I was

- Involved in a number of NASA (National Association of Students of Architecture) design competitions as the lead in architectural presentation teams
- College delegate for the NASA events in 2010, 2012 and 2014.
  Part of the international college tour to Spain in 2012.
- Conducted architectural surveys and studies of traditional architecture in cities like Patan, Jaipur, Siddhapura, Udaipur, Indore, and Surat where we critically studied the areas on a variety of factors including history, demographics, typical housing design, economics, major industries located in the region, existing town planning and current town planning proposals by the competent authorities, vernacular culture and architecture of the region, and urban fabric.

Lady Andal Higher Secondary School, Chennai   Completed in 2010

Graduated High School with an 80% score. The 6 subjects included Maths, Physics, Chemistry, Computer Science, English and German.

WORK AND TRAINING EXPERIENCE

The Appsolutes, Chennai   Oct 2016 - Present
Visual Designer

I joined The Appsolutes on a trial basis as a graphic designer for the first two months. I utilised my architectural presentation as a portfolio along with certain logos I had made for 99designs to apply for the job. The Appsolutes is a team of developers that create websites and apps for small businesses and organisations. My job included designing

- logos and brand identities for small businesses
- web user interfaces.

Mindspace Architects, Bangalore   Jan 2015 - Nov 2015
Intern Architect

This 11 month training period was part of our academic curriculum. Due to my prior experience, I was tasked with far more responsibilities than interns traditionally get. I worked on a total of 12 different projects in different capacities. My job involved

- developing architectural designs and details
- developing technical drawings for construction
- 3D modeling
- architectural rendering
- parametric modeling
- project management

KSM Architects, Chennai   Jan 2014 - June 2014
Intern

During the 4th year, 7th semester, I suffered a major accident which took me 3 months to recover. Since I was not allowed to skip credits of the given semester and move to the next one, I had to take a year off and continue education in the following year. This training occurred during the time when I was in my home town in Chennai, as I had enough time after I had recovered. During my time, I worked on 3 separate high rise residential projects and one industry project.

EsTeam Architecture, Surat   May 2012 - July 2012
Junior Intern

This was a voluntary training period that I took up during the summer vacation after I completed my 2nd year. I was able to better understand the parallel factors that are looked at while designing which we quite often ignore in academic work. I worked on the design scheme for a farmhouse. Apart from that, I was able to develop a number of software skills that proved useful later on in my academic career.
